Ultrastructure of insulin-producing cells from adult and neonatal rats. The ultrastructure of insulin-producing cells in rat pancreatic islets was studied at the light and electron microscopic levels in adult and neonatal rats. To determine the site of synthesis of insulin in the pancreatic islets, insulin-immunoreactive products in the pancreatic islets of rats of both ages were localized immunohistochemically using a peroxidase-antiperoxidase technique. The results showed that in both adult and neonatal rats: 1) the cytoplasm of the insulin-producing cells contained an abundant number of RER cisternae, clear vesicles, and tubular structures; 2) the Golgi complexes and rough endoplasmic reticulum were relatively dilated; 3) mature secretory granules were seen in the pancreatic islets of both ages; 4) exocytosis of insulin from the B-cells took place in both adult and neonatal rats. It was concluded that the B-cells were able to synthesize, package, and release their contents to the outside of the cells normally in both adult and neonatal rats. The fact that the site of synthesis of insulin is not restricted to only the islet B-cells of adult rats has been confirmed.

Q: Access Object in a Vector from a function? I am quite new to the Java world, so this is probably a silly question. I have a Vector containing Java Objects, that is filled in from a CSV file. I am trying to do several validations on the objects. Currently, in the code below, if the object in the Vector is invalid, I create a new one and put it in the Vector. It feels like this is a bad design, and there has to be a more elegant solution

## What's New In?

1. Click **Photoshop.app/Contents/Resources/Brushes**. 2. Click **New** to open the Brush Tool panel. 3. Type **forest** in the **Brush Width** text box. In **Brush Shape**, select **Flat** and then **Pressure**. 4. In the **Brush Shape** pop-up menu, select **Brush Tip**. 5. In the **Brush Size** pop-up menu, select a number from 0 to 8 and then click **OK**. 6. In **Brush Fill**, select a color from the color picker and then click **OK**. 7. If you're using a pressure-sensitive stylus instead of a mouse, click **Tool Options** and select a pressure level from the **Pen** pop-up menu. The brush is shown using the Forest brush in the previous example. 8. Now try painting with the Forest brush. Click and drag in an image area to create a stroke. Use the Shift key to create larger brush strokes. When you create a stroke, Photoshop creates a new layer and makes a selection around the image area that you've selected. ## Using the Spot Healing Brush tool The Spot Healing Brush tool (sometimes also referred to as the Spot Healing Brush) can be used in the same way as the Clone Stamp tool, but it's most often used to fix imperfections in photos. Use it to erase scratches, repair blemishes, and fix small pieces that the Clone Stamp tool can't reach. To use the Spot Healing Brush tool, follow these steps: 1. To apply the Spot Healing Brush tool, click the tool in the Tools panel or press **T**. 2. Click an area of the image that needs fixing. 3. Choose the **Spot Healing Brush** tool from the Tool Options (second icon from the left in the Tool Options panel; see Figure 6-16). Figure 6-16: Use the Spot Healing Brush to select and repair areas of an image. 4. Click and drag in the image to select the areas you want to work on. You can use the Spot Healing Brush tool to erase and add lines and strokes to fix imperfections in images. ## Using the Smudge tool The Smudge tool is useful for subtly smearing one color
